

1A) For several generations, stories from Africa have traditionally been passed down by word of mouth. Often, after a hard day's work, the adults would gather the children together by moonlight, around a village fire and tell stories. This was traditionally called 'Tales by Moonlight'. Usually, the stories are meant to prepare young people for life, and so each story taught a lesson or moral.

In the African folktales, the stories reflect the culture where diverse types of animals abound. The animals and birds are often accorded human attributes, so it is not uncommon to find animals talking, singing, or demonstrating other human characteristics such as greed, jealousy, honesty, etc. The setting in many of the stories exposes the reader to the land form and climate within that region of Africa. References are often made to different seasons such as the 'dry' or 'rainy' season and their various effects on the surrounding vegetation and animal life.

```
2A) #include <stdio.h>
int main() {
    int n, sum = 0;
    // Prompt user for input
    printf("Enter a positive integer (n): ");
    scanf("%d", &n);
    // Check if the input is a positive integer
    if (n <= 0) {
        printf("Please enter a positive integer.\n");
        return 1; // Indicate an error
    }
    // Calculate the sum using a for loop
    for (int i = 1; i <= n; i++) {
        sum += i; // Add current number to sum
    }
    // Display the result
    printf("The sum of the first %d natural numbers is: %d\n", n, sum);
    return 0; // Indicate successful execution
}
```

```
3A) #include <stdio.h>
int main() {
    int number;
    printf("Enter an integer: ");
    scanf("%d", &number);
    if (number % 2 == 0)
    {
        printf("%d is an even number.\n", number);
    } else {
        printf("%d is an odd number.\n", number);
    }
    return 0; // Indicate successful program execution
}
```
